Backend Engineer

PROFILE

Backend-oriented software engineer focused on database-backed products, API design, auth/payment workflows, and production deployment.

EDUCATION

Michigan Technological University, Houghton, MI
M.S. Computer Science

CGPA: 3.9/4.0
Graduated Apr 24, 2026

Pune Institute of Computer Technology, Pune, India
B.E. Computer Engineering

GPA: 8.14/10
Jun 2024

EXPERIENCE

Freelance Sole Developer | The Mind Point - Mental Health Education Platform
Pune, India

Aug 2025 - Present

- Delivered paid course enrollment for a live business by building checkout, enrollment, admin tracking, and notification workflows with Next.js, Clerk, Razorpay, Resend, PostHog, and Vercel.
- Reduced manual enrollment handling by integrating Razorpay payments, automated confirmations, Google Sheets tracking, and authenticated account flows from scratch.

Teaching Assistant - Physics Department | Michigan Technological University
Houghton, MI

Sep 2024 - Apr 24, 2026

- Supervised and graded physics labs for 100+ students across four semesters, guiding experiments, explaining concepts, and providing clear feedback across five lab sections per semester.

Technical Intern | CVBDSL Lab, SCTR's Pune Institute of Computer Technology
Pune, India

Feb 2023 - May 2023

- Analyzed RSA and related encryption approaches in Python/Jupyter during a four-month academic internship, comparing implementation tradeoffs for computational cost and efficiency.

SELECTED PROJECTS

YayCamp - Campground Discovery Platform | *Next.js, TypeScript, Prisma, PostgreSQL, Clerk, React Leaflet* | [Live](#) | [GitHub](#)

- Built and deployed a full-stack campground app with auth-protected workflows, Prisma data modeling, PostgreSQL persistence, and server-rendered Next.js routes.
- Structured relational campground data and application flows around searchable listings, saved state, and map-backed discovery without relying on unsupported usage metrics.

MonkeyLang-CS - Interpreter Port | *C#, .NET, TDD* | [GitHub](#)

- Ported Thorsten Ball's Monkey interpreter from Go to idiomatic C#, implementing lexer, parser, AST, evaluator, object system, REPL, functions, closures, arrays, hashes, and built-ins.
- Followed the book's test-first workflow to practice interpreter internals, language runtime design, and disciplined implementation across a translated architecture.

Ranking App - Preference Ranking Tool | *TypeScript, React, Next.js, Redis* | [Live](#) | [GitHub](#)

- Designed and built a novel preference-ranking app that uses decision latency as a confidence signal, weighting close vs. decisive matchups before normalizing rankings to 100.
- Backed user-defined item sets with Redis while keeping ranking interactions client-side for a fast bracket flow.

TECHNICAL SKILLS

Languages	TypeScript, Python, Java, C#, Go
Backend	Node.js, Express.js, REST APIs, Prisma ORM
Databases	PostgreSQL, Redis, MongoDB
Auth & Payments	Clerk, JWT, Razorpay
DevOps	Docker, Git, Vercel, Linux
Testing / Systems	TDD, interpreter design
