

Ayush Juvekar

PROFILE SUMMARY

I am an ambitious full-stack developer currently pursuing a Master's in Computer Science, with a strong foundation in both frontend and backend technologies. I have successfully completed multiple projects, focusing on enhancing performance and user experience. My skills in programming languages, data analysis, and machine learning equip me for diverse roles in software development.

EDUCATION

- 2026 MS/M.Sc(Science)
Michigan Technological University
- 2024 B.Tech / B.E.
Pune Institute of Computer Technology, Pune
- 2020 XIIth
English

INTERNSHIP

- 670 Days
Michigan Technological University

Projects

- 274 Days
The Mind Point
 - Developed a full-stack e-commerce platform for The Mind Point, specializing in mental health education, utilizing Next.js 15 and React 19. - Implemented secure payment processing with Razorpay and user authentication via Clerk for seamless transaction management. - Designed a dynamic course marketplace featuring BOGO campaigns, variable pricing structures, and persistent shopping cart functionality. - Built an enrollment system that auto-generates confirmation numbers and sends email notifications using Resend. - Integrated Google Sheets for effective admin tracking and established a loyalty points system to enhance user retention. - Ensured compliance with WCAG accessibility standards and integrated PostHog analytics to derive actionable insights for platform improvement.
- 334 Days
YayCamp - Full-Stack Camping Platform
 - Architected a full-stack application using Next.js with server-side rendering and Clerk authentication to manage over 100 users. - Reduced page load time by 40% through efficient coding practices. - Designed a PostgreSQL schema integrated with Prisma ORM, optimizing queries and achieving 99.9%

uptime.

334 Days

Secure Data Analytics with Homomorphic Encryption

- Built a privacy-preserving data analytics pipeline using CKKS encryption for healthcare data. - Achieved 98% accuracy while maintaining HIPAA compliance and containerized modules with Docker to streamline deployment.

334 Days

Anomaly Detection in Crowd Surveillance

- Trained a convolutional neural network (CNN) achieving 92% accuracy on over 10,000 frames. - Optimized inference time by 73% using TensorFlow Lite on Jetson Nano, enabling real-time monitoring across five edge devices.

610 Days

IoT Air Quality Monitoring System

- Engineered a CO monitoring system that utilizes the MQTT protocol to reduce detection time through machine learning predictive alerts. - Presented findings at the ESCI 2023 international conference and improved accuracy by 20% through advanced filtering techniques.

424 Days

Particle Vibration Analysis System

- Developed a computer vision system that tracks over 50 particles at 60 frames per second with high precision. - Conducted statistical analysis to correlate motion patterns with vibration frequencies, reducing manual analysis time by 75%.

334 Days

MonkeyLang-CS - Programming Language Interpreter

- Implemented a complete lexer, parser, and tree-walking interpreter that supports functions, closures, and first-class functions. - Built a Read-Eval-Print Loop (REPL) environment with over 95% test coverage for lexical analysis and semantic evaluation.

334 Days

Ranking App - Tournament Bracket System

- Developed a tournament bracket application with a decision-time-weighted scoring algorithm. - Implemented real-time data persistence using Redis to synchronize brackets across multiple devices.
