## Backend Engineer

### PROFILE

Backend-oriented software engineer focused on database-backed products, API design, auth/payment workflows, and production deployment.

### EDUCATION

**Michigan Technological University**, Houghton, MI  
*M.S. Computer Science*

**CGPA: 3.9/4.0**  
Graduated Apr 24, 2026

**Pune Institute of Computer Technology**, Pune, India  
*B.E. Computer Engineering*

**GPA: 8.14/10**  
Jun 2024

### EXPERIENCE

**Freelance Software Developer** | Coherence Academy  
Pune, India

Aug 2026 - Present

- Building Coherence Fee Desk, a Next.js platform replacing the academy's spreadsheet-based admissions, fee collection, and reporting.
- Migrated server workflows, OTP auth, and libSQL persistence to Effect V4 through stacked, independently deployable PRs, covered by 330+ unit/Effect tests and Playwright browser workflows on isolated databases.
- Separately build and run the software for Coherence-backed events such as Campus Connect and Mission 95: public registration sites with OTP checks, participant IDs, UPI payments, and Sheets sync.

**Freelance Sole Developer** | The Mind Point - Mental Health Education Platform  
Pune, India

Aug 2025 - Present

- Delivered paid course enrollment for a live business by building checkout, enrollment, admin tracking, and notification workflows with Next.js, Clerk, Razorpay, Resend, PostHog, and Vercel.
- Reduced manual enrollment handling by integrating Razorpay payments, automated confirmations, Google Sheets tracking, and authenticated account flows from scratch.

**Teaching Assistant - Physics Department** | Michigan Technological University  
Houghton, MI

Sep 2024 - Apr 24, 2026

- Supervised and graded physics labs for 100+ students across four semesters, guiding experiments, explaining concepts, and providing clear feedback across five lab sections per semester.

### SELECTED PROJECTS

**YayCamp - Campground Discovery Platform** | *Next.js, TypeScript, Prisma, PostgreSQL, Clerk, React Leaflet* | [Live](#) | [GitHub](#)

- Built and deployed a full-stack campground app with auth-protected workflows, Prisma data modeling, PostgreSQL persistence, and server-rendered Next.js routes.
- Structured relational campground data and application flows around searchable listings, saved state, and map-backed discovery without relying on unsupported usage metrics.

**MonkeyLang-CS - Interpreter Port** | *C#, .NET, TDD* | [GitHub](#)

- Ported Thorsten Ball's Monkey interpreter from Go to idiomatic C#, implementing lexer, parser, AST, evaluator, object system, REPL, functions, closures, arrays, hashes, and built-ins.
- Followed the book's test-first workflow to practice interpreter internals, language runtime design, and disciplined implementation across a translated architecture.

### TECHNICAL SKILLS

|                   |                                            |
|-------------------|--------------------------------------------|
| Languages         | TypeScript, Python, Java, C#, Go           |
| Backend           | Node.js, Express.js, REST APIs, Prisma ORM |
| Databases         | PostgreSQL, Redis, MongoDB                 |
| Auth & Payments   | Clerk, JWT, Razorpay                       |
| DevOps            | Docker, Git, Vercel, Linux                 |
| Testing / Systems | TDD, interpreter design                    |
